## Industrial Ultrasonic Rodent Moduals

Registered by Health Canada PCP Act Registration No. 29215 this model represents the most advanced ultrasonic repeller for rats and mice on the market today.

### Applications

- Industrial Rodent Management
- Commercial Rodent Control
- Non Toxic Rodent Management for Schools Institutions

### Features

- Triple Speaker For 180 Degrees of Signal Blast
- Non Toxic Rodent Control Sounds Like A Jack Hammer to Rats and Mice
- Ultrasonic signal constantly modulates between 32 and 62 kHz so rodents cannot adapt!
- Powerful 110db output as measured from one meter distance from the speaker.

The Rodent Repeller produces complex sound waves in a sweeping frequency range of 32 to 64 kHz and pulses at 60 80 times per second. Rodents easily hear the sound generated in rooms up to approximately 800 square feet of unobstructed space. Rodents however, cannot adapt to the complex signal which is constantly changing and this what makes the Industrial Ultrasonic so effective.
